

Jordan Burger

Senior Full Stack Engineer

Garland, UT • [linkedin.com/in/jordan-burger](https://www.linkedin.com/in/jordan-burger) • github.com/jordanburger22

SUMMARY

Full stack engineer with 3+ years building production systems. Architected 31 interconnected systems for an e-commerce platform (78.5% of 153K+ line codebase). Built browser-based IDE serving 500+ students in restricted environments where commercial solutions fail. Proven ability to independently design complex systems: compatibility engines, real-time social features, multi-runtime code execution, and enterprise authentication.

EXPERIENCE

Acting CTO / Senior Full Stack Engineer

GunKustom • Contract (Minority Stakeholder) • Sep 2024 – Present

- Architected 31 production systems from scratch: compatibility engine, social platform, content moderation, price tracking, enterprise auth
- Built 2,700-line AR compatibility engine encoding mechanical constraints—core IP estimated 6-12 months to replicate
- Independently invented Reddit-style heat algorithm for forum trending; designed 5-tier content moderation system
- Implemented enterprise auth: TOTP/MFA with AES-256-GCM encryption, progressive lockout, trusted devices, backup codes
- Owned 78.5% of codebase at MVP launch (49K backend lines in 3 months); 100% of commits in final 10 days

Instructor / Full Stack Developer

Simply Coding • Full-time • Nov 2024 – Present

- Built browser-based IDE with server-side code execution for correctional facilities where Replit/CodeSandbox are blocked
- Architected microservices execution platform: queue management, concurrency control, template caching (12-30x speedup)
- Created semantic code validation engine testing behavior not formatting—25% higher completion vs industry average
- Platform serves 500+ students across 10+ facilities with 99%+ uptime in highly restricted network environments

Lead Developer

EngineerSmith (Standalone Product) • Jan 2025 – Present

- Built multi-tenant certification platform with multi-runtime code execution (Node, Python, SQL, Dart)
- Designed 5 question types with semantic auto-grading, sandboxed execution, and console capture for debugging
- Implemented complete test lifecycle: question banks, session management, proctoring, analytics dashboards

Full Stack MERN Instructor

V School • Full-time • Jun 2023 – Sep 2024

- Taught full stack development to 70+ students; built curriculum modules on authentication, REST APIs, React patterns
- Led weekly workshops and 1:1 mentoring; consistently received top feedback for approachability and clarity

KEY TECHNICAL ACHIEVEMENTS

Compatibility Engine — Rules engine encoding AR-15/AR-10/AR-9 mechanical constraints (bolt face, gas systems, threading). 43 part types, 30+ rule pairs, weighted scoring. Core IP.

Real-time Social Platform — Community builds (photo sharing), engagement system (likes/follows/saves), XP gamification, forum with heat algorithm, WebSocket notifications.

Enterprise Auth System — TOTP with encrypted secrets, MFA (email/SMS), progressive lockout, trusted devices, 5-tier RBAC, audit logging, Cloudflare Turnstile.

Code Execution Platform — Multi-runtime (Node/Python/SQL/Dart), Worker Threads isolation, Pyodide for browser Python, template caching, semantic grading.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML/CSS

Frontend: React, Next.js, Tailwind CSS, Context API, Custom Hooks, Monaco Editor

Backend: Node.js, NestJS, Express, REST APIs, WebSocket, Mongoose

Databases: MongoDB, PostgreSQL, Aggregation Pipelines, Redis

Infrastructure: AWS, Docker, Cloudflare (R2/Workers/WAF), Datadog, GitHub Actions

Auth & Security: JWT, TOTP/MFA, OAuth, RBAC, AES-256-GCM, bcrypt
